

Special Issue on Usable Security and Privacy

Call for Papers *For March 2007*

As fraud explodes the increased failure of diffusion, adoption, and effective use of security technologies after initial adoption becomes an ever more urgent research question. The IEEE Society on Social Implications of Technology has an interest in expanding the understanding of the interaction of the human element with the full range of security and privacy technologies. We invite papers on the usability of security and privacy technologies as a socio-technological phenomena, a design challenge, and as a philosophical question.

IEEE Technology and Society seeks submissions for peer review on the topic of Security, Privacy and Usability. Original research papers on the following topics are sought:

- Usability analyses of specific technologies
- Design for usability in security and privacy
- Theories of design applied to security and privacy
- Studies of human-computer trust
- Empirical studies of user behavior with particular interests in authenticating information s
- Theoretical models of security and privacy
- Philosophical inquiries on security and privacy
- Value-sensitive design of security and privacy
- Risk models of end users
- Human factors analysis in security
- Novel interface designs for existing security systems
- Trust-building systems for online interactions
- Security, privacy and usability in pervasive computing

IEEE Technology & Society is a quarterly published by the IEEE Society on Social Implications of Technology. Peer-reviewed papers that are published in IEEE Technology & Society are available in the IEEE on-line library Xplore.

Papers sought for the March 2007 issue

Submissions February 1, 2006	Expected reply June 1, 2006	Revisions as needed due October 1, 2006
